

Wet Felting Shrinkage Rate Cheat Sheet

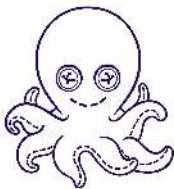

How to Use

1. Find the row for the **Target Size** you would like your finished felted piece to be

*E.g. If you want a side of your finished item to be 12 inches long, find the row with 12 on the left under **Target Size***

2. Move along the row to the column that matches the **Shrinkage Rate** of your wool to find the size your wool layout or resist needs to be

*E.g. If the shrinkage of your wool is 30%, go along the row to the column that says look 30% under **Shrinkage Rate**. It says 17, so you need to make your layout or resist 17 inches for that side*
